

# The Grocery Store

This will be a grocery website where user can browse through different items listed on the website and can add items to cart. They can view the cart and proceed to check-out that will re-direct them to a payment gateway.

This Application will be very useful for people who cannot go outside for grocery shopping, so this website will bring the grocery store at the home for them. They will be able to order their grocery with few clicks sitting at home

The website will have below listed features:

- The Navigation menu
- Login/Sign up
- User profile
- Order History
- Re-order Previous order
- Add Address
- Grocery List
- By Category filter
- Add to cart Button on items
- Cart
- Payment gateway

All the above-mentioned features will be needed on the website, We will need to have user profile where user will be able to see all the address he has added to his accounts and manage them, Also they will be able to see their order history and can re-order a particular order from that list.

Below are the five websites that have similar ideas as mine: -

1. Grofers
2. Big basket
3. JioMart
4. Amazon Pantry
5. Flipkart Grocery Supermart
